

CustomstoneSA

Quality Concrete Pavers, Coping & Walling

Proudly Manufactured in South Australia

We love your coping. Our pool looks awesome!

J Turner

The density of the product and the inclusion of a water repellent in the mix means that all products are suitable for use in coastal areas and around saltwater pools. Coping is available for many popular pools and we can make custom shapes for new or existing pools.

Honed and Effects finishes highlight the aggregate, creating an interesting textured surface to complement both contemporary and traditional architecture. The exposed aggregate can assist in covering up the dirt left by children and pets and can be used to create attractive borders or features.

The row of Effects finish pavers makes an excellent border between the path and our outdoor dining area. It defines the space.
